

3M's superior window films 3M help families with XP

Windows let in the light and offer beautiful views. But the sunlight they invite in can also cause severe damage to an individual with XP. 3M Window Films are designed to reject harmful UV rays, keep out solar heat, help protect. Not only do 3M films cut energy cost by up to 30% they block up to 99% of harmful UV rays which can allow XP patients the freedom in their own home.

This year XP Family Support Group has received thousands of dollars worth of help from 3M with their corporate giving. 3M has jumped in to help film dozens of homes here in the US, Schools where XP students attend, family's automobiles, and camp Dermadillo.

Without the help of 3M, their generous dealers who provide donated labor and XP Family Support Group many families would not be able to open their windows with protective film and let the protected light in.

From the bottom of our heart we salute 3M and their dealers who have made a difference in XP individual's lives.
